

RESEARCH NOTE 2013

CROP: Peas

MATERIAL: Mobilizer

RATE: 4L/ Ha

APPLICATION: 27/9/12

LOCATION: Otane, Central Hawkes Bay, New Zealand

TREATMENT: 1/ Control: Regular fertilization program

2/ Treated: Regular fertilization program plus Mobilizer to soil 6 days prior to planting seed with Roundup

Cost: \$38.25 / Ha

RESULTS:

Treatment	Yield	%
Control	3.423 Ton / Ha	
Mobilizer	3.8958 Ton / Ha	12 % Increase

NOTES: Mobilizer has been shown to increase yield and profitability of crops. This data shows that there was a positive increase in yield and profit, however it is our belief that benefits may be further increased with more suitable application timings - At planting and or split into two applications at 2 L/ Ha at planting and pre flower. Mobilizer is not a fertilizer and is prone to weathering
